

06. Kinematics, inverse kinematics, Programming of a simulated robotic arm

Warning

Test 2 on December 8.

Rehearsal

3D transformations

- **Position:** 3 element offset vector

- **Orientation:** 3 x 3 rotation matrix
 - additional orientation representations: Euler angles, RPY, angle axis, quaternion
- **Pose:** 4 x 4 transformation matrix
- **Coordinate frame:** origin, 3 axis, 3 base vector, right-hand rule
- **Homogeneous transformations:** rotation and translation together
 - e.g. \mathbf{R} for rotation and \mathbf{v} for translation:
