06. Kinematics, inverse kinematics, Programming of a simulated robotic arm

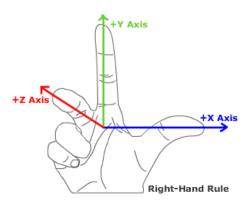

Test 2 on December 8.

Rehearsal

3D transformations

· Position: 3 element offset vector

- Orientation: 3 x 3 rotation matrix
 - additional orientation representations: Euler angles, RPY, angle axis, quaternion
- Pose: 4 × 4 transformation matrix
- Coordinate frame: origin, 3 axis, 3 base vector, right-hand rule
- · Homogeneous transformations: rotation and translation together
 - e.g. $\mbox{\mbox{\mbox{$\cdot$}}}$ for rotation and $\mbox{\mbox{\mbox{$\cdot$}}}$ for translation:
